## Question:

CTU Training Solutions has tasked you to create a capturing system for their facilitators, using ASP.NET MVC5. The system should allow the facilitator to add a new student to the system, Edit the details of the students when needed, show the details of each student, and delete a student once they drop out or de-register. They have asked to use their CTU colours (marron and light grey), together with their logo. All the information must be stored, retrieved, and updated on SQL database.

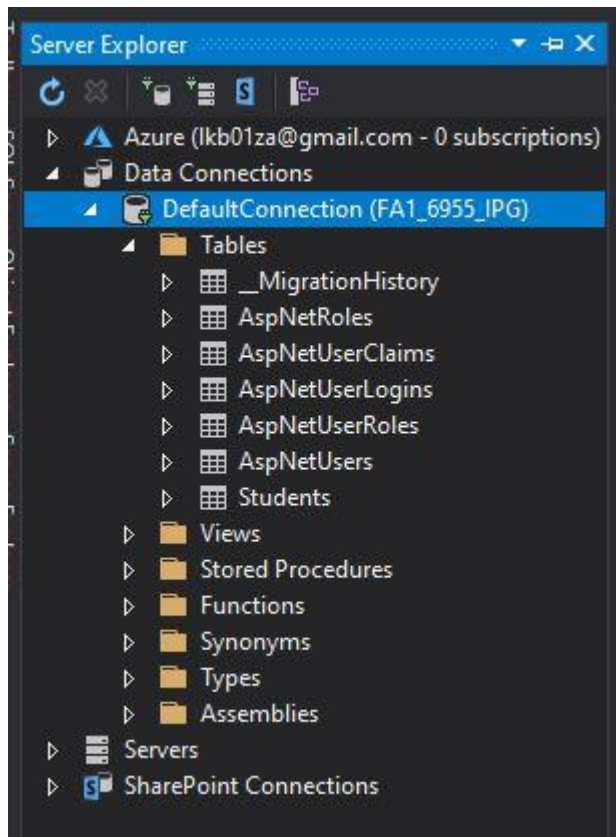

- Create appropriate models and connect it to your database (SQL).
- Allow facilitators to Register, upon successful Login they can manipulate the system.
- Create appropriate controllers that will communicate to the model and the view.
- Create appropriate views that displays as illustrated.
- Create 5 new students.
